EXPERIENCE

FREELANCE WEB DEVELOPER; VANCOUVER, WA — 2017-PRESENT

Contributed to a number of different projects, including building custom Wordpress themes, and optimizing existing WordPress sites for speed and usability, creating static websites from scratch, and building prototypes for admin interfaces.

LEAD FRONT-END DEVELOPER, OLITION; PORTLAND, OR — 2017-PRESENT

Worked closely with the back-end developer and designer to complete the MVP of Olition, an online platform (built with Ruby on Rails) to create and share elegant online memorials for your loved ones..

UI DEVELOPER, GAMBIT; PORTLAND, OR — 2016-2017

Assisted and lead front end development of numerous client projects, including websites, dashboards, web apps, and living styleguides. Projects were built using various frameworks and platforms, including Laravel, Symfony, Ruby on Rails, WordPress, or built "from scratch" (generally using PHP). Our clients were from a variety of industries, including healthcare, shipping, payment systems, and financial planning.

FREELANCE WEB DEVELOPER & DESIGNER; VANCOUVER, WA — 2015-2016

Creation and content management of several Squarespace websites, including customization of templates using code to fit the branding and needs for each client. Several of these projects were more design-heavy, including creation of print and web advertisements for a local political campaign, and print design for weddings. Other projects included the design and development of custom MailChimp templates for a fantasy sports startup to use for marketing and user communication.

FRONT-END DEVELOPER & DESIGNER, WOOBOX; VANCOUVER, WA — 2012-2014

Projects varied in size and important, but mainly related to the front end and sales-related portions of the website or the usability of the admin interface. Tasks included everything from updating content on the website, to redesigning the entire dashboard, to creating marketing materials and ad graphics. Additionally, I served as a means of reference for our back-end developers and founder to bounce ideas off of for new features, apps, and functionality. As needed, I organized and oversaw all aspects of custom projects and feature requests, from the initial contact, to the contract agreements, to the assignment and completion of the project and its related tasks.

CUSTOMER SUPPORT MANAGER, WOOBOX; VANCOUVER, WA — 2011-2012

Worked with customers and prospective customers to explain how the apps work, troubleshooting issues that came up (whether live, past, or potential), addressing concerns of users, walking them through the setup and other pre- and post-promotion steps necessary for a successful campaign. Additionally, I was tasked with selecting a support software platform to use for our growing customer needs, as well as setting it up and coding a custom layout for the knowledge base.
